ABOUT ME

Started as an electronic programmer, with experience working on small projects in this industry as a freelancer. After that, I considered joining a technology company and have been with DiCentral ever since. Thanks to clear direction, I have the ability to self-research and study. Now I have enough confidence to develop myself further. I hope to be able to participate in technology activities, software outsourcing, or cross-platform business activities. From there, I can improve my skills and knowledge as well as bring my knowledge to help the company develop, if trusted and entrusted.

WORK EXPERIENCES
